Subject: Lake Conestee

Hi Alayna, Shanna, and Quinn,

Below is a summary of things about the Lake Conestee site. SCDHEC is going to the field next week. Please take a look at the items below and the folder I shared with you. I'd like to discuss it briefly before Alayna and I talk with them in the afternoon.

- SCDHEC is about to sample Lake Conestee next week.
- They have prepared a QAPP that is almost ready for sign-off.
- Sampling activities is being conducted in phases. Phase I occurred in August 2020.
- Next week's event is Phase II.
- They are sampling from downstream to upstream.
- The bulk of next week's activities will be conducted upstream of the lake.
- Not much sampling has been done downstream of the lake.
- The map in the QAPP is not oriented correctly. They do have a North Arrow.
- Lake Conestee is south of Greenville.
- This is intended to be a contaminated sediments site with no identified source.
- Or at least comingled releases that cannot be tied to specific sources.
- It seems like the site should be more Reddy River. I don't know what their plans are to collect more samples below the lake.
- The file information says that fishing is recreational. Consumption is not known at this point.
- Alayna let them know that they need to document fishing for consumption within the zone of contamination.
- They also have been notified about wetlands verification at the sampling locations.
- The QAPP was updated to indicate which locations are wetlands.

Thanks
